RESEARCH IDEAS I'D LIKE TO PURSUE

1. Figure out what we know and what we don't know (in the scientific literature) about human-robot/AI relations, and figure out what next question we can pursue in this area. One promising direction is the new gpt o1 advanced voice combined with lip-sync avatars. These communicate in real-time in your language with emotion.
2. Figure out if a study has been done on what happens in the brain when AWE is felt. So, for example, when I show someone something in my office that blows their mind and which they had never considered before (such as the petrified lightening or vortex sphere or levitating ball). Then figure out if we can measure that and discover the benefits.
3. Explore the use of AI for empathetic counseling, business advice, legal advice, etc.
4. Citation source as weight (by outlet or type or own citations). So what if we created a new impact score based on the weight of the citations. e.g., if my paper is cited by an MISQ article, it counts more than if it is cited in a dissertation.
